FEMUTEC Engineering GmbH

C.Plutschinski@femutec.de

Since the first of August 2007 the executive board of FEMUTEC Engineering GmbH has been reinforced by a Director Finance (CFO). For this position Mr. Frieder Carle, already shareholder of FEMUTEC, could be recruited.

October 2007

Same as Dr. Hendrik Schafstall and Michael Wohlmuth, Mr. Carle started as a mechanical engineer after his studies. His business began with process engineering as well as second plant management at Phoenix AG in Hamburg, Harburg.

More than 20 years ago, Mr. Carle changed for the central financial scope of Phoenix AG. Here he passed all controlling departments: plant- and factory-, products-, sales-, results-, business,- unit- and division-controlling.

As an assistant of the CTO manager he accompanied a great number of acquisitions of German and international plants and companies as well as their integration into the Phoenix AG - network. In total there have been many long-term stays abroad, especially in Hungary, Malaysia, India and China.

For more than 10 years Mr. Carle was the Financial Director (CFO) of the PHOENIX TRAFFIC TECHNOLOGY GmbH.

The Managing Directors Dr. Hendrik Schafstall and Michael Wohlmuth are very pleased to have won their co-shareholder Frieder Carle for the operating business. The internationalization as well as the constantly growing business volume is an urgent matter for this step.

Meanwhile there are enough tasks in accountancy and financial matters, in controlling and reporting as well as in HR personnel development. Even in quality management, other administrative tasks and different projects, Frieder Carle will take care of.

As the Financial Director (CFO) and member of the board, Frieder Carle is acting per general power of attorney.

About Femutec Engineering GmbH

The Hamburg, Germany based, Femutec Engineering GmbH supports its customers as a solution provider for production technology, offering optimization and production process design by process simulation. In addition, FEMUTEC offers optimization of forming parts through structural analysis. With Simufact.forming, Femutec generates and markets a global industry solution for massive forming. In addition, the Hamburg-based company specializes in service, offering individual solutions to customers' production problems using state-of-the-art CAE tools. Trainings and technical support for software use complete the company's offerings. FEMUTEC customers come from all areas of massive forming technology: welding, cold massive forming, rolls, sheet metal forming as well as mechanical joining. More information about FEMUTEC can be found at: www.femutec.com
