Simufact Engineering GmbH Announces 13th International RoundTable “Simulation in Bulk Metal Forming Technology” in Bamberg

Industry experts are invited to submit presentations about their application and experiences in the simulation of bulk metal forming processes

Hamburg, December 20th, 2011 – Simufact Engineering GmbH, a leading provider of software and services in the area of process simulation in the manufacturing industry, today announces that its 13th RoundTable will take place at the Welcome Hotel in Bamberg, Germany, from April 23-26, 2012.

The RoundTable brings together experts, engineers and managers of the branch and is dedicated to simulation in bulk metal forming. The attendees will have the possibility to gain insights into the broad application range of process simulation and will learn more about the latest trends and news of the industry. A key focus will be the simulation of entire process chains, which are indispensable for today's innovative engineering tasks. This includes the entire process simulation, i.e. that a forming simulation builds on results taken from a casting simulation and can thereafter be continued with a joining analysis, for example welding.

The international focus of the RoundTable offers all attendees the possibility to network and to exchange experiences with peers from other countries and regions. Simufact users from all industries are invited to submit their presentations on forming simulation and to contribute to the success of the 13th RoundTable. Official conference languages are German and English, simultaneous translation for both will be provided.

Since its inception in 1998 the yearly RoundTable evolved into a constantly growing, top-class, and international event. Last year's event attracted more than 150 attendees from all over the world to Bamberg. Next year, the RoundTable will - for the first time - take place in spring and at the same time as the Hanover Fair, Germany's big industrial trade show. Simufact thus provides - especially the international attendees - the possibility to attend the RoundTable, and to add a visit to the world's biggest industry trade show, while staying in Germany.

“With the 13th RoundTable we are pleased to continue the standing tradition to host the event in Bamberg“, said Michael Wohlmuth, Managing Director of Simufact Engineering. „Process simulation becomes increasingly important to stay ahead of the competition. An optimized production process is a key factor of a company's economic efficiency and we are proud to offer a platform for networking and exchange of experiences, news, and trends to the experts of this industry with our event.“

The conference program of the RoundTable includes two full days with many interesting presentations - partly presented in parallel sessions. The technical showcase will offer attendees the possibility to learn more about partner solutions, to build new relationships and to foster existing ones. The traditional evening events on both conference days and the guided company visits on day three, during which attendees will have the possibility to look at the use of process simulation in practice, will complete the conference.

More information about the 13th RoundTable can be found at: www.roundtable.simufact.eu.

About Simufact Engineering GmbH

Simufact Engineering GmbH is an internationally operating software and service company for complex process simulation in the manufacturing industry. For more than 15 years, the company has developed and supported simulation solutions for the design and optimization of manufacturing processes in metal processing and is one of the leading companies in this field. Based on leading standard technologies, Simufact Engineering GmbH develops and globally markets industry solutions for the forming and welding technology and heat treatment. The company is also specialized in service, offering individual solutions to customers' production problems using state-of-the-art CAE tools. Software training and technical support complete Simufact's performance. Simufact customers come from all areas of manufacturing technology: forging, cold massive forming, rolling, sheet metal forming, mechanical joining, heat treatment, and welding. For more information, please visit www.simufact.com.
